# Motivation

- Webbased cartographic styling is a re-occurring topic...
- Various standards for cartographic symbolisation of geodata available:
  - Official standards: OGC SLD with Filter Encoding (FE)
  - Industrial standards: e. g. Mapbox Styles
  - Project-related styling:  
e. g. QGIS or OpenLayers
- Tons of customer specific solutions

Image source: <https://tenor.com/NqaJ.gif>

- Ready-to-use map styling library
- ES6 & TypeScript
- React & Ant Design
- Open Architecture
  - Style format independent
  - Data format independent
- Modular UI components → fully customizable
- Development since about 2 years
- Cooperation terrestris and meggsimum
- Open Source (BSD)

# GeoStyler

# Open Architecture

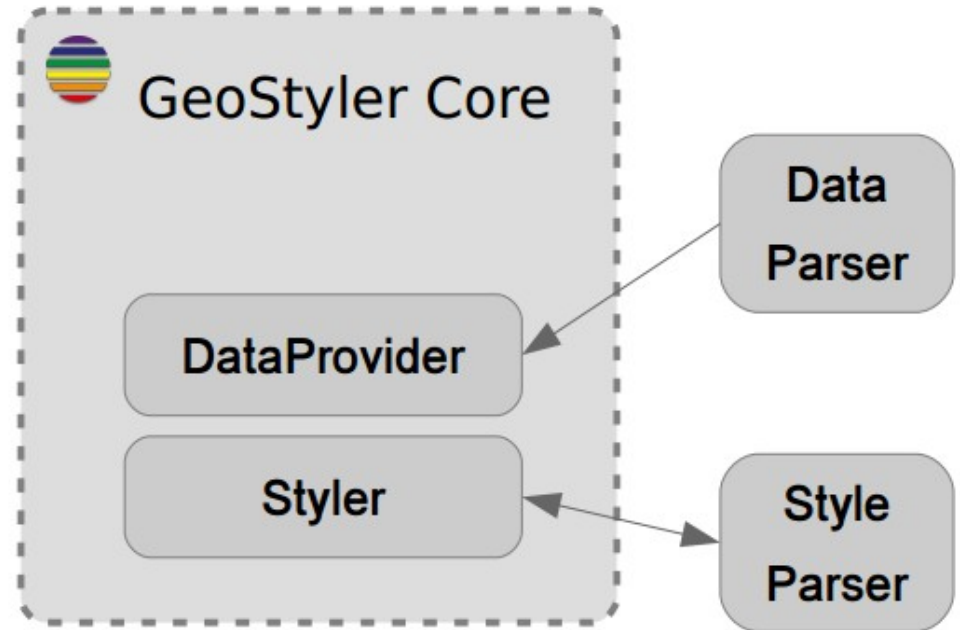

- Existing Parsers

- Style

- SLD
    - Mapbox
    - QGIS
    - OpenLayers
    - Mapfile (WIP)

- Data

- WFS
    - GeoJSON
    - Shapefile

# Open Architecture

- Internal JSON style format
- Only internally used in GeoStyler Core
- Rulebased styles
  - Inspired by SLD and Mapbox
- One JSON-object per style
- Typed

```
{
  "name": "Demo Style",
  "rules": [
    {
      "name": "Rule 1",
      "symbolizers": [
        {
          "kind": "Mark",
          "color": "#0E1058",
          "wellKnownName": "Triangle"
        }
      ]
    }
  ]
}
```

# GeoStyler Features

- Rulebased styles (incl. Symbolizer)
- Complex filters
- Previews
- (Automatic) Classifications
- Scale ranges
- Calculation of overlapping rules
- Usage with / without UI elements
- Different layouts
- I18n (Language wrapper)

Color	Quantity	Label	Opacity
	95		
	110		
	135		
	160		
	185
